Your portfolio is under macro pressure from three converging forces: AI valuation reset post-Broadcom, rate-hike fears from the strong jobs report, and oil pressure from the Iran/Hormuz crisis. **None of this invalidates the structural thesis** of your positions.

Top 3 priorities: (1) June 10 CPI — if cool, add to NOW near \$100. (2) Watch CBRS Form 4 filings daily — lockup expiry is your #1 near-term risk. (3) Do nothing on MU until June 24 earnings — binary event.
