## Semiconductor Selloff — Worst Session Since March 2020

Nasdaq −4.18% · SOX (Philadelphia Semiconductor Index) worst day since March 2020 · \$1T erased in 48 hours. Triple catalyst: Broadcom miss + strong May jobs (172K) reviving rate-hike fears + Iran suspends talks, oil spikes 6%.

## Geopolitical & Macro Landscape

### US-Iran Conflict

Strait of Hormuz partially blocked — 21% of world oil. Iran suspended talks June 1. Brent spiked 6% in one session.

**My view:** 60% partial resolution by Q3. 40% summer escalation — \$200/barrel scenario.

### AI / Chip War

China now holds 41% of its AI chip market domestically (vs 10% in 2023). Huawei advancing rapidly.

**My view:** Decoupling is permanent. PLTR and NOW relatively insulated with no China exposure.

### Federal Reserve

New Chair Kevin Warsh (since May 15). Next FOMC: June 16-17. Market pricing 98% no change.

⚡ **Critical CPI: June 10**  
JP Morgan recession probability: 35%.

## Sector Scorecard

| Sector                 | Status          | My Outlook                                  | Signal               |
|------------------------|-----------------|---------------------------------------------|----------------------|
| AI / Semiconductors    | Deep correction | Thesis intact — accumulation zone           | Wait · CPI first     |
| Enterprise AI Software | Under pressure  | PLTR, NOW: dip = opportunity                | Selective accumulate |
| Defense & Aerospace    | Outperforming   | Structural tailwind from Iran conflict      | Bullish              |
| Energy / Oil           | Elevated        | Near-term \$85-100. Resolution = sharp drop | Neutral              |
| Gold / Metals          | Strong          | Structural bull market through 2027         | Bullish              |
| Crypto (broad)         | Bear pressure   | BTC \$60K defense. CLARITY Act = catalyst   | Selective by asset   |

## Scenario Probabilities

### Bull Scenario

25%

Cool CPI + Iran deal + CLARITY Act → explosive recovery in semis and crypto. S&P 500 above 7,600. XRP +50%+.

### Base Scenario

50%

Muddle-through → Fed on hold → Iran contained → range-bound 7,000-7,600. Slow partial recovery.

### Bear Scenario

25%

Hot CPI + Iran escalation + Warsh hike signal → JP Morgan's 35% recession materializes → S&P 500 tests 6,500.

## Investment Opportunities

### Opportunity 1: Bitcoin (BTC) — \$60K = Institutional Entry Price

BTC at \$60K today is the same level institutions paid in April. Strategy added 80,000 BTC in 2026 alone. BlackRock ETF continues daily accumulation. \$60K is the critical psychological support — the most likely scenario is a hold and bounce.

**Entry:** \$58-62K in tranches · **Target:** \$80-90K on macro improvement · **Stop:** \$54K

 **Opportunity 2: Coinbase (COIN) — CLARITY Act Proxy Trade**

COIN is the single largest beneficiary of US regulatory clarity. Platform volume exceeds \$1.5T annually. CLARITY Act unlocks institutional asset management on-chain at unprecedented scale. Stock down 30% from peak.

**Entry:** \$180-200 · **Target:** \$280+ (12 months) · **Catalyst:** CLARITY Act vote June 2026

 **Opportunity 3: AMD — Better-Valued Chip Diversification**

AMD fell 12.6% in the same selloff but trades at a more reasonable valuation than MU. MI300X GPU gaining AI market share. No direct China revenue exposure — key advantage in the chip war environment.

**Entry:** \$100-115 · **Target:** \$150+ · **Risk:** Medium

 **Opportunity 4: Stellar (XLM) — Tokenization Wave**

XLM surged 40% after DTCC chose its network for tokenized securities — proof that traditional finance is beginning to adopt public blockchains. XLM has a similar use case to XRP but lower valuation.

**Entry:** \$0.08-0.10 · **Target:** \$0.20-0.25 · **Catalyst:** DTCC + bank partnerships

 **Bottom Line — My Complete Assessment**

We are in temporary pressure driven by three converging forces: AI valuation reset post-Broadcom, rate-hike fears from the jobs report, and oil pressure from the Hormuz crisis. **None of this invalidates the structural thesis** of your portfolio or crypto broadly.

This week’s priorities: (1) June 10 CPI — if cool, add to NOW. (2) Watch CBRS Form 4 daily. (3) Do nothing on MU until June 24. For opportunities outside your portfolio: BTC at \$60K and COIN pre-CLARITY Act are the two best near-term setups.
